Full-Stack AI Engineer · AI Automation Specialist · LLM Systems · Remote-Ready

SKILLS

AI / LLM: Prompt Engineering, LLM Evaluation, RLHF, RAG, AI Data Pipelines, OpenAI API, LangChain (basics), Make.com/n8n
Languages: Python, TypeScript, JavaScript, Dart
Backend: Node.js, Express, RESTful APIs, WebSockets, Firebase Cloud Functions, JWT Auth
Frontend / Mobile: Flutter, React (basics), Dart, HTML/CSS
Databases: MySQL, Firestore, Firebase Realtime DB
Cloud & DevOps: AWS, Azure, Docker, CI/CD, GitHub Actions

EDUCATION

Air University, Islamabad — Sept 2020 – June 2024

Bachelor of Science in Information Technology | CGPA: 3.01/4.0

Courses: Cloud Computing, DevOps, Artificial Intelligence and Machine Learning, Data Structures, Discrete Structures, Internet of Things, Database Management Systems, Computer Networks, Switching and Routing

WORK EXPERIENCE

Full Stack AI Trainer — Jan 2025 – Feb 2026

Freelance (Remote) – LLM, Python, JavaScript, TypeScript

- Designed and evaluated 100+ coding tasks across Python and TypeScript to train frontier LLMs, scoring model outputs on accuracy, instruction-following, edge-case handling, and code quality using structured rubrics aligned with RLHF methodologies.
- Authored gold-standard responses and adversarial multi-turn prompt scenarios used to stress-test model behavior, directly improving output consistency and task relevance across production AI pipelines.
- Operated fully asynchronously across international time zones, consistently meeting quality benchmarks and delivery deadlines; demonstrating readiness for high-performance remote engineering roles.

AI Associate — July 2024 – Dec 2024

NBP – AI Integration, Process Automation, Data Pipelines, Python

- Identified and scoped automation opportunities across internal banking workflows, reducing manual reporting overhead by streamlining data collection and processing pipelines.
- Built and maintained structured data systems to support decision-making, applying Python scripting to automate repetitive data tasks and generate actionable insights.

PROJECTS

AI-Powered Voting Platform — Feb 2025 – May 2025

Node.js, Express, MySQL, WebSockets, JWT Auth, OpenAI API, NLP

- Built a full-stack voting platform with role-based auth (admin, candidate, voter) and a live WebSocket dashboard delivering sub-second real-time vote analytics.
- Integrated an AI-powered sentiment analysis module using OpenAI API to process voter comments, surfacing opinion trends and engagement insights for administrators.

AI-Powered Supply Chain Lead Qualification & Outreach Automation — Jan 2026 – March 2026

Make.com, Claude API, Apify, Apollo.io, Perplexity API, HubSpot, Instantly.ai

- Architected a 5-agent Waterfall pipeline to autonomously qualify and route inbound supply-chain leads, cutting response time from 54 hrs to 6 hrs and reducing rep qualification workload by 83%.
- Built a domain-specific BANT-S scoring model with Claude API prompt chaining, lifting lead-to-meeting conversion from 11% to 17% and reducing cost per qualified lead from \$42 to \$11; included a human-in-the-loop Slack approval flow achieving 83% rep acceptance rate.
